

HomeMe / Web2py Installation Guide

HomeMe | June 6th, 2017

Install Python

- If Python is not already installed on your computer, we recommend installing Python via the client [Anaconda](#).

Install Git

- [Install git](#) if you don't have it by some chance.
- Some sort of terminal is required to run git command line
 - For Mac OS X: iTerm2
 - For Windows: [Cygwin](#), [Cmdr](#), [ConEmu](#)

Download the Web2py Client

- Download the [source distribution](#) of Web2py. Unzip anywhere you'd like.

Download the HomeMe package

- Download the HomeMe package from [here](#). Unzip the compressed folder into 'applications' folder of the Web2Py client directory you just installed.

Running HomeMe

- Begin by running Git and navigating to the web2py client folder. Once there, type "python web2py.py" and press 'enter'. This should open a pop-up asking for password and a port number (leave this at the default) . Type in any password you like and press 'start server'.
- A web page should then open. Click the 'my sites' tab on the navigation bar at the top of the screen, then click the 'homeme' link that should appear on the following page.
